

KIESELSTEIN INT'L GMBH GERMANY

A 3D view and a close-up of KIESELSTEIN's SH-Tr 630 model.

What do you offer?

KIESELSTEIN International GmbH produces wire drawing and wire-shaving equipment as well as auxiliary equipment such as payoffs and take-ups. One recent project was for a high-speed traversing spooling machine for a German customer. The spooling speed is 35 m/s. Despite this high rate, the machine is able to traverse the spool for an even and vibration-free laying of the wire. For detecting the flanges of the spool, the machine is equipped with a laser detector. In this way, different types of spools can be used, but the spooling result is always at high quality. The spooling is realized smoothly so that the superior quality surface of the wire is protected.

What should readers know about your company?

- 1. Focus.** We are a leading manufacturer of wire drawing equipment engineering produced to meet a customer's demand and the intended application.
- 2. Involvement.** We are a leader in wire shaving (peeling) technology due to our intense R+D activities in our in-house testing center (k.lab) and global experience from a large variety of projects for our customers.
- 3. Choices with a "green" touch.** We offer single machine components for producing wire as well as complete wire production lines as turnkey projects. With our "Green Commissioning" concept, our customers are able to commission our machines on their own, supported remotely by our engineers.
